

Maximum Translucency and Strength

Cosmetic Zirconia for the Esthetic Zone

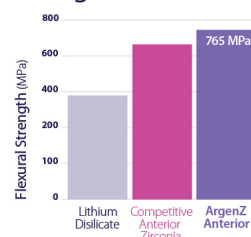

ArgenZ Anterior Zirconia crowns and bridges deliver an optimal increase in translucency and vitality. The composition of ArgenZ Anterior contains cubic zirconia which refracts light for an optical effect similar to that of natural teeth. The outcome is a highly esthetic restoration with lifelike results.

Translucency

Strength

- Exciting alternative to lithium disilicate
- 25% More Translucent than HT Zirconia
- Flexural Strength of 765 MPa
- Single to 3-unit Anterior Bridges
- Single Unit Posterior Crowns
